The program uses the System.Collections.Generic, System.IO, and System.Text.Json namespaces, which provide classes for managing collections, working with files, and serializing and deserializing JSON data.

Added feature:

- 1. Mood category that adds a layer for even more prompts
- 2. Word count info for user to track their progress in their entries
- 3. Having '>' to indicate user input

- 4. Saving File:
  - No saving of empty Journal Entry
  - No Invalid Character for the file name
  - Overwrite option if file name chosen is already in the directory
  - Converts save entry as '.json' format
  - Auto '.json' extension when saving

Daen Antule,  
Apr 26 at  
9:55pm

- 5. Loading File:
  - Having option to choose files available in the directory (.json files) rather than typing file name

- 6. Basic input validation and error handling

This evaluation was completed by a certified grader. Please select "View Rubric" to see the rubric feedback left by your grader. If you believe there is an error in how your submission was graded according to the rubric, please message your grader in Canvas through the "Assignment Comments" box. CRITERIA		RATINGS				PTS
Approach <a href="#">view longer description</a>	<b>3 pts Complete</b>	<b>2.2 pts Developing</b>	<b>1.5 pts Attempted</b>	<b>0 pts Incomplete</b>	3 / 3 pts	
	A class diagram is included showing the proper inheritance hierarchy and defines all classes needed for this assignment. (For the Foundation 4 option, this includes class diagrams for all programs.)	A class diagram is included showing inheritance and most of the classes needed.	A class diagram is included showing at least two classes.	A class diagram is not included.		
						
Behaviors <a href="#">view longer description</a>	<b>3 pts Complete</b>	<b>2.2 pts Developing</b>	<b>1.5 pts Attempted</b>	<b>0 pts Incomplete</b>	3 / 3 pts	
	All behaviors needed for the project are defined. (For the Foundation 4 option, this includes behaviors for all programs.)	Most behaviors needed for the project are defined.	Some behaviors are defined for at least two classes.	No behaviors defined.		
						
Attributes <a href="#">view longer description</a>	<b>2 pts Complete</b>	<b>1.4 pts Developing</b>	<b>1 pts Attempted</b>	<b>0 pts Incomplete</b>	2 / 2 pts	
	All attributes needed for the project are defined. (For the Foundation 4 option, this includes behaviors for all programs.)	Most attributes needed for the project are defined.	Some attributes are defined for at least two classes.	No attributes defined.		
						
Interaction <a href="#">view longer description</a>	<b>2 pts Complete</b>	<b>1 pts Attempted</b>	<b>0 pts Incomplete</b>	2 / 2 pts		
	A diagram or description explains the interaction among the elements of the design well enough that another person can clearly understand their relationships.	Some description of the program interaction is explained.	No interaction explained.

A modification to the Foundation 2 program to show creativity and exceed requirements is to read and load data from two separate text files (order and customer).			
A modification to the Foundation 3 program to show creativity and exceed requirements is by reading and loading event details from a text file and having a menu option for the user to choose which event they would like to view or typing 'all' to view all, or 'quit' to end the program.			Daen Antule, May 31 at 1:43pm
Modifications to Foundation 4 to show creativity and exceed requirements is by again reading and loading user exercise data from a text file, providing a menu option for the user to access and display individual user data with the corresponding user ID as authentication, or by choosing admin to display all exercise data from all available users in the text file.
